Abstract

The malay language could be written in a script called Jawi script. The Jawi script is based on Arabic script with 6 additional characters. The UNICODE standard initially did not have complete encoding for the additional 6 Jawi characters, thus make it difficult for users to use Jawi in computing. Recent UNICODE standard version 5.1 have all character encoding.

1. Introduction

The malay language is a unique language. It could be written in two script, latin alphabet and arabic-base script. The use of Arabic-based
